

About TriEagle

VALUE
TRUST
STABILITY

We work every day to be the most respected Retail Energy Provider for business and industry because we deliver for our customers: **Value** through energy cost savings made possible by our experience and creativity. **Trust** through understanding your electric energy needs and providing customized solutions and products. **Stability** through a locally-owned and financially-sound company partnered with other industry leaders.

We are a low-cost/high-value electricity provider with ready access to capital and stringent cost controls. As a closely held company, we answer to our customers, not to Wall Street analysts. We focus on what is important in today's competitive retail market: solid liquidity to meet our ongoing operational and capital requirements. Unlike the publicly traded Retail Electric Providers whose focus tends to be on short-term quarterly earnings, TriEagle has taken a long-term view of the marketplace and is uniquely positioned to deliver outstanding services to customers.

TriEagle's executive leadership has extensive experience and networks within the wholesale and retail segments of the energy industry in Texas and nationwide. TriEagle actively participates in ERCOT committees and industry forums in order to help shape energy policy now and in the future.

In keeping with our commitment to customer focus and service excellence, we have developed relationships with service partners allowing us to provide complete transactional transparency for our customers. TriEagle Energy utilizes the services of **ANB Enterprises** on an on-going basis to develop software solutions for all aspects of the business ranging from customer acquisition to financial management. To ensure the highest level of customer service, we have retained **ista North America** as our billing and fulfillment provider. This industry leader has operations in 25 countries and billings of approximately 11 million customers. TriEagle Energy has also employed **EC Power** to provide EDI services, data transformation, intelligent transaction routing, and web-based reporting services.
