

Renewable Energy

Go Green With TriEagle

Who says doing the right thing for the environment has to be expensive? Whether you are getting LEED-certified, or just want to reduce your company's carbon footprint, TriEagle can customize a renewable (or "green") energy option for you. While a small portion of your power will already be from renewable resources in Texas (wind, solar, etc.), we can replace from 10% to 100% of your regular power with certified renewable energy credits. Texas leads the nation in the generation of wind energy, and your business can support this continued effort through renewable energy purchases. As more green energy options are developed, the cost for "greening" your power have never been more economical.

Other Ways Your Company Can Reduce Its Carbon Footprint:

- ✓ Promote carpooling to employees
- ✓ Reduce the need to copy and print, and when you need to, copy and print on both sides of the paper
- ✓ Reuse items like envelopes, folders, and paper clips
- ✓ Set up a bulletin board for memos rather than sending copies to each employee
- ✓ Use recycled paper and recycle printer cartridges
- ✓ Use more reusable water bottles rather than disposable cups.
- ✓ Turn off power strips and lights at the end of the day.
- ✓ Consider flexible work schedules or telecommuting
